# Secure Analog-to-Digital Converters

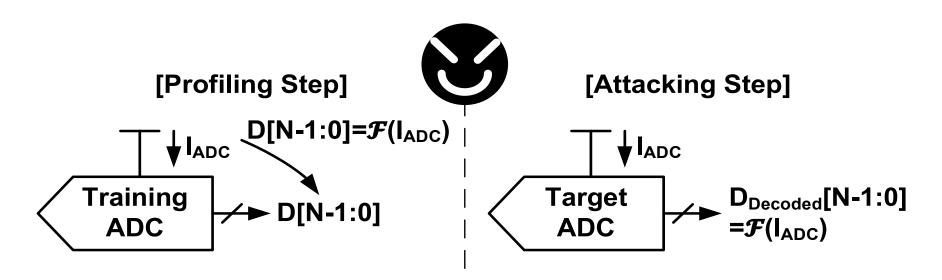

Hae-Seung (Harry) Lee Anantha Chandrakasan

Massachusetts Institute of Technology

#### **Problem Statement**

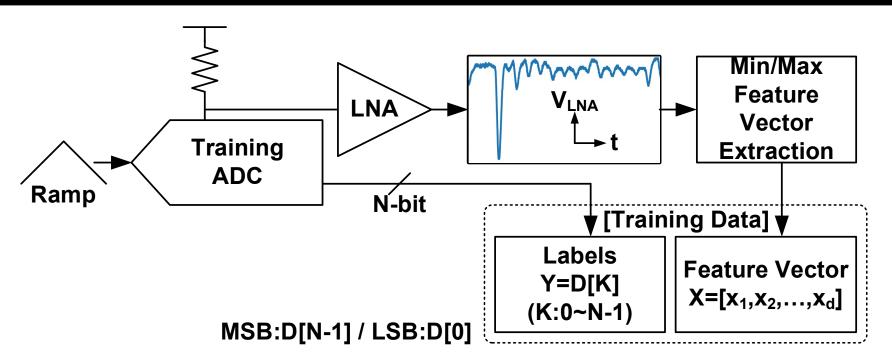

- Side-channel attacks (SCAs) such as power side-channel attacks (PSAs) and electromagnetic side-channel attacks (EMSAs) are of increasing concerns.
- Much research has been done on SCAs and countermeasures on digital systems.
- System security is only as good as the weakest link in the system.
- Analog-to-digital converters (ADCs) are ubiquitous in most electronic systems, yet their SCA vulnerability received little attention.
- ADCs, due to their switching activities, are vulnerable to SCAs.

#### **Attack Overview**

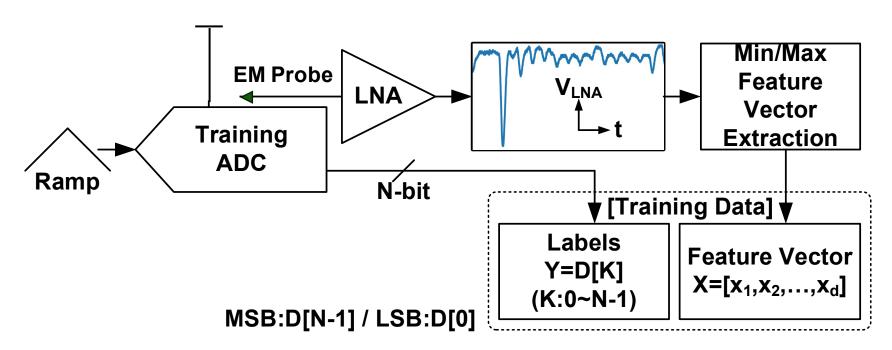

- ☐ PSA or EMSA consists of 2 steps
  - Profiling (training): Build mapping function  $D[N-1:0] = \mathcal{F}(I_{ADC})$ 
    - Use neural networks to build F
  - Attacking (inference): Use F to decode I<sub>ADC</sub> into D<sub>Decoded</sub>[N-1:0]

## **Profiling – Training Data Acquisition (PSA)**

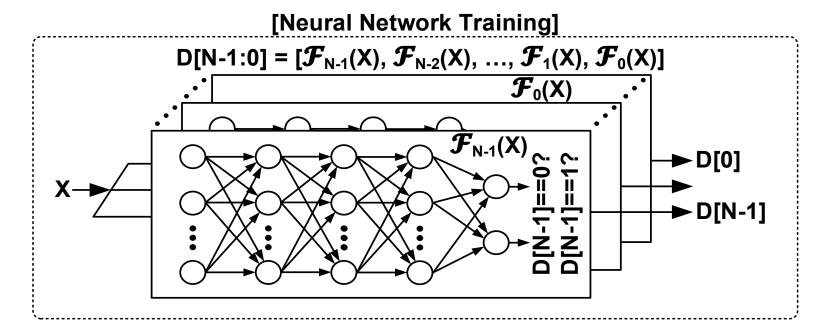

- ☐ Obtain [Feature vector : A/D conversion result] pairs from training ADC
  - We used Min/Max current values each ½ clock cycle as feature vector
     MIT confidential, not for distribution

## **Profiling – Training Data Acquisition (EMSA)**

- ☐ Obtain [Feature vector : A/D conversion result] pairs from training ADC
  - We used Min/Max current values each ½ clock cycle as feature vector
     MIT confidential, not for distribution

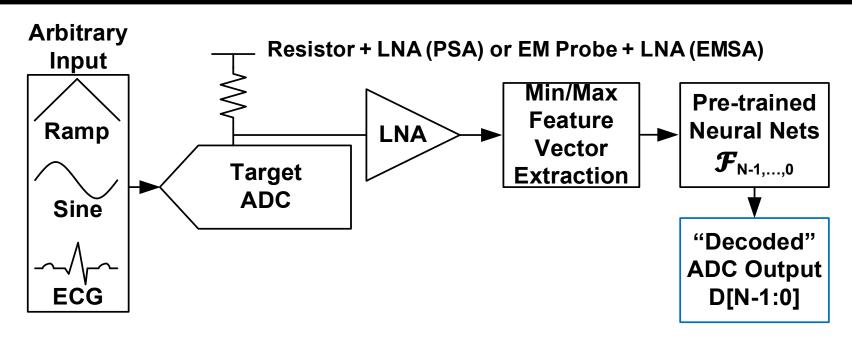

## **Profiling – Neural Network Training**

- $\square$  Train "N" neural networks to build mapping function D[N-1:0]= $\mathcal{F}(X)$ 
  - Each fully-connected neural network or CNN decodes different bit of D[N-1:0]

    MIT confidential, not for distribution

## **Attacking**

 $\square$  By using pre-trained neural networks  $\mathcal{F}(X)$ , attack decodes supply current waveform of target ADC that is converting arbitrary input

#### **PSA Results – Commercial ADC-A**

☐ Bit-wise accuracies with ramp input (truncated to the nearest hundredths)

| Bit-wise<br>Acc. (%) | D[11] | D[10] | D[9]  | D[8]  | D[7]  | D[6]  | D[5]  | D[4]  | D[3]  | D[2]  | D[1]  | D[0]  |
|----------------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| ADC1                 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 99.98 | 100.0 | 99.98 | 99.93 | 99.99 | 99.36 | 96.23 |
| ADC2                 | 100.0 | 100.0 | 100.0 | 100.0 | 99.99 | 100.0 | 99.99 | 99.98 | 99.78 | 100.0 | 99.33 | 97.30 |
| ADC3                 | 100.0 | 100.0 | 99.99 | 100.0 | 99.77 | 99.98 | 99.75 | 99.93 | 99.05 | 99.87 | 96.50 | 91.71 |

☐ RMS error in LSB for various ADC input signals (<u>rounded to the nearest hundredths</u>)

| RMS error<br>(LSB) | Ramp | ECG  | Sine0.1Fs | Sine0.2Fs | Sine0.3Fs | Sine0.4Fs | Sine0.5Fs |
|--------------------|------|------|-----------|-----------|-----------|-----------|-----------|
| ADC1               | 0.47 | 0.65 | 2.46      | 20.06     | 2.97      | 2.18      | 5.21      |
| ADC2               | 1.26 | 1.12 | 2.69      | 3.47      | 4.34      | 6.08      | 5.27      |
| ADC3               | 7.46 | 2.14 | 10.79     | 16.11     | 18.79     | 19.77     | 17.89     |

#### **PSA Results – Commercial ADC-B**

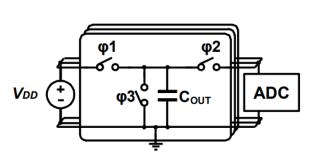

☐ Bit-wise accuracies with ramp input (truncated to the nearest hundredths)

| Bit-wise<br>Acc. (%) | D[11] | D[10] | D[9]  | D[8]  | D[7]  | D[6]  | D[5]  | D[4]  | D[3]  | D[2]  | D[1]  | D[0]  |
|----------------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| ADC1                 | 100.0 | 100.0 | 99.81 | 99.97 | 99.82 | 99.36 | 99.85 | 99.23 | 99.82 | 99.96 | 99.69 | 63.87 |
| ADC2                 | 99.98 | 99.99 | 99.97 | 99.95 | 99.96 | 99.93 | 99.95 | 99.85 | 99.89 | 99.96 | 99.83 | 63.31 |
| ADC3                 | 99.90 | 99.95 | 98.73 | 99.48 | 99.16 | 99.30 | 99.66 | 99.21 | 99.68 | 99.93 | 97.08 | 55.62 |

☐ RMS error in LSB for various ADC input signals (<u>rounded to the nearest hundredths</u>)

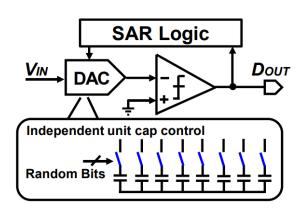

| RMS error<br>(LSB) | Ramp  | ECG   | Sine0.1Fs | Sine0.2Fs | Sine0.3Fs | Sine0.4Fs | Sine0.5Fs |
|--------------------|-------|-------|-----------|-----------|-----------|-----------|-----------|
| ADC1               | 25.24 | 5.51  | 14.10     | 10.21     | 11.41     | 12.66     | 13.51     |
| ADC2               | 25.18 | 9.73  | 7.08      | 4.81      | 4.86      | 10.75     | 2.87      |
| ADC3               | 72.80 | 32.27 | 50.88     | 40.79     | 58.59     | 44.70     | 63.79     |

#### **Previous Secure ADCs (MIT)**

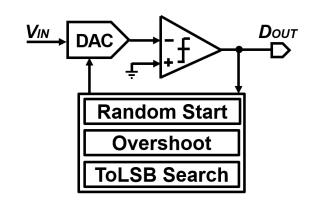

#### Switched capacitor Equalizer

T. Jeong, JSSC 2021

# Random timing conversion

M. Ashok, CICC 2022

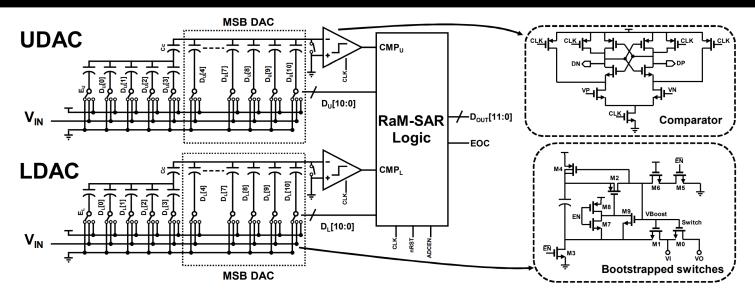

## Random mapping Conversion

R. Chen, VLSI 2022 CICC 2023

MIT confidential, not for distribution

#### **Enhanced Random Mapping ADC (1)**

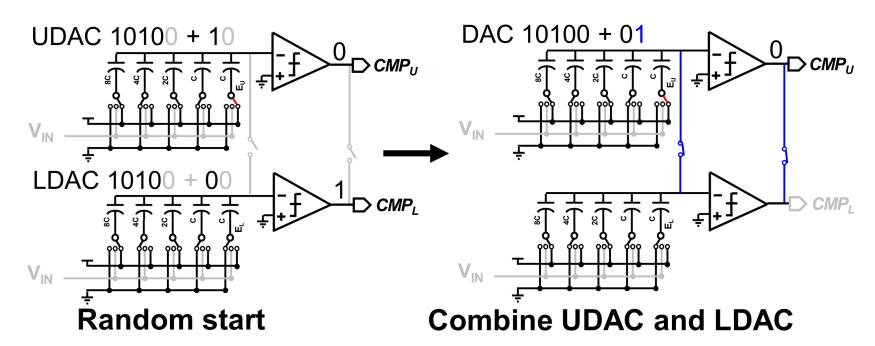

#### Architecture

- Split DAC into UDAC and LDAC (no power/area penalty)
- Each bit search is randomized
- Low power/area/conversion time overhead compared with unsecure ADCs
- Much more effective power trace randomization

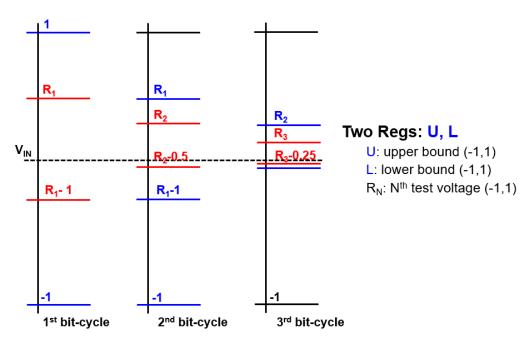

MIT confidential, not for distribution

#### **Enhanced Random Mapping ADC (2)**

Combine DACs for 2 LSB it cycles to lower noise

#### **Example Conversion Sequence**

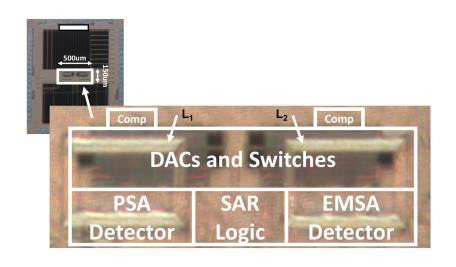

Provides on average 9x10<sup>12</sup> different power supply traces for each digital output codes (even pseudorandom-number generator is used)

Total 3.6 x10<sup>16</sup> traces for a 12 bit ADC

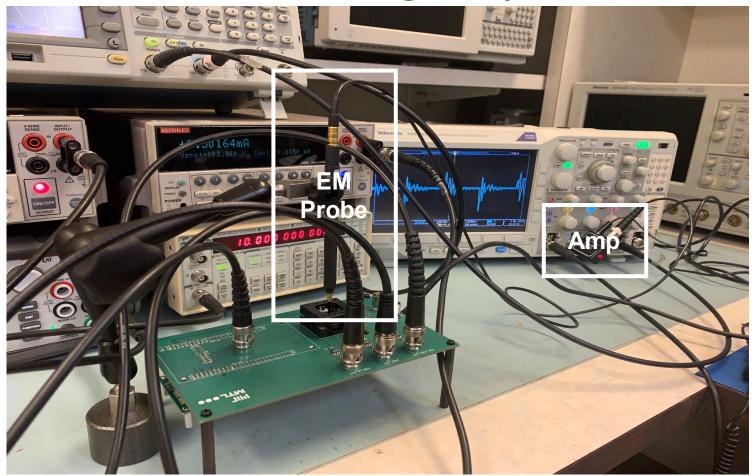

MIT confidential, not for distribution

## **Chip Micrograph**

| Chip speci              | fications |
|-------------------------|-----------|
| Process technology      | 65nm LP   |
| VDD [V]                 | 1.2       |
| Resolution [b]          | 12        |
| Sampling Rate<br>[MS/s] | 40        |
| Area [mm²]              | 0.075     |
| ENOB [b]                | 10.8      |
| FoM (fJ/cs)             | 9.8       |

## **EMSA Testing Setup**

## Random Mapping Results: PSA and EMSA (1)

#### ■ Bit-wise accuracy with ramp input (averaged across 3 ADCs)

| Bit-wise Acc. (%)                                     | D[11] | D[10] | D[9]  | D[8]  | D[7]  | D[6]  | D[5]  | D[4]  | D[3]  | D[2]  | D[1]  | D[0]  |
|---|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| VDD-side PSA <sup>1</sup> (unprotected <sup>2</sup> ) | 99.18 | 98.46 | 97.25 | 98.76 | 99.75 | 99.38 | 99.16 | 96.75 | 93.48 | 92.12 | 88.17 | 83.26 |
| VDD-side PSA (protected)                              | 52.76 | 51.72 | 48.19 | 48.76 | 49.76 | 50.76 | 50.28 | 53.17 | 54.71 | 57.15 | 55.86 | 45.76 |
| GND-side PSA (unprotected)                            | 99.56 | 99.42 | 96.16 | 97.48 | 96.23 | 99.81 | 99.43 | 98.23 | 97.84 | 85.16 | 76.48 | 78.63 |
| GND-side PSA (protected)                              | 48.76 | 49.75 | 51.76 | 52.84 | 53.91 | 53.27 | 45.86 | 52.74 | 50.17 | 46.26 | 50.75 | 50.19 |
| EMSA <sup>1</sup> (unprotected)                       | 99.43 | 98.16 | 99.47 | 99.28 | 98.71 | 99.72 | 98.63 | 99.75 | 96.17 | 93.28 | 90.45 | 88.94 |
| EMSA (protected)                                      | 51.24 | 53.82 | 54.12 | 49.15 | 48.72 | 48.61 | 47.74 | 45.54 | 46.72 | 52.47 | 50.14 | 50.64 |

## Random Mapping Results: PSA and EMSA (2)

#### ■ RMS error in LSB for various ADC input signals (averaged across 3 ADCs)

| RMS error (LSBs)           | Ramp    | ECG     | Image   | Sine0.1Fs | Sine0.2Fs | Sine0.3Fs | Sine0.4Fs | Sine0.5Fs |
|----------------------------|---------|---------|---------|-----------|-----------|-----------|-----------|-----------|
| VDD-side PSA (unprotected) | 52.76   | 20.16   | 32.14   | 16.78     | 20.16     | 25.76     | 23.75     | 45.13     |
| VDD-side PSA (protected)   | 1985.25 | 2675.17 | 1863.76 | 2516.78   | 2394.64   | 1963.76   | 2246.76   | 1876.18   |
| GND-side PSA (unprotected) | 48.91   | 45.18   | 36.76   | 32.17     | 25.18     | 28.76     | 32.17     | 42.73     |
| GND-side PSA (protected)   | 2054.12 | 1986.47 | 2163.76 | 2246.46   | 1768.46   | 1732.94   | 2234.76   | 2346.71   |
| EMSA (unprotected)         | 36.04   | 53.17   | 78.46   | 62.17     | 58.76     | 63.76     | 56.84     | 31.93     |
| EMSA (protected)           | 1806.74 | 1746.52 | 2246.37 | 2634.76   | 2519.46   | 2476.83   | 2546.98   | 2246.83   |

<sup>&</sup>lt;sup>1</sup>Convolutional Neural Network (CNN) based side-channel attack is done by collecting 500K samples from a ramp signal as in [3] on a training ADC and performing the attack on 3 other ADCs with 50K samples for various inputs. <sup>2</sup>The protected ADC is in the secure mode.

- Small RMS error without protection
- Large RMS error with protection

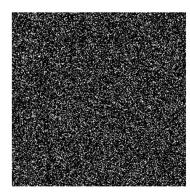

#### **Example Images of EMSA**

Original image

EMSA on the unprotected ADC

EMSA on the protected ADC

- Information is leaked without protection
- Information is leakage is prevented with protection

#### **Summary & Future Research**

#### Current equalizers

- Effective against PSA
- Incurs area and power penalty
- Vulnerable to EMSA

#### Random mapping

- Very effective against PSA and EMSA
- Low area/power/performance penalty
- Limited to SAR ADCs

#### Future research topics

- Currently, EMSA is a proximity attack. Longer range EMSA needs to be investigated
- Attack/protection on different types of ADCs
  - Delta-sigma ADCs
  - Time-interleaved ADCs
  - Time-domain ADCs
  - Pipeline ADCs
